LIND ELECTROSCOPES

For Radio-Active Determinations

Designed for and used by the United States Bureau of Mines

LIND INTERCHANGEABLE ELECTROSCOPE

Designed to combine several instruments in one, securing all the advantages in convenient form, and at low cost, together with attainment of accuracy of high degree. Note accompanying illustration.

- A. Nickel-plated housing, containing leaf system and supporting the microscope.
- B. Open discharge chamber for solids.
- C. Gas-tight emanation chamber.

For complete description see our Bulletin No. 175. Send for it.

LIND GAMMA RAY ELECTROSCOPE

A single-unit—not interchangeable. Nickel-plated brass cylinder 13 cm. high; 9 cm. in diameter, with lead lining inside 3 mm. thick. Leaf chamber in the discharge chamber itself, into which is also fixed, by means of a split collar with heavy screw, the reading microscope with numbered scale. Chamber mounted on one end of wooden base 33 x 6 inches, along which extends nickel-plated track 2¼ feet long on which a light carriage support for the radium tube may be fixed by a binding screw at any desired distance from discharge chamber. The Ra tube is held by a light spring clip against a conclave bar, graduated in 1/16 inch, to facilitate centering tube and determining its length. A 1/4 inch removable lead screen 6 x 6 inches is placed immediately against discharge chamber to shield from radium tube.

For more complete description see our Bulletin No. 175. Send for it.
