

SUBJECT INDEX

INDUSTRIAL AND ENGINEERING CHEMISTRY

VOLUME 16—1924

ABSORPTION SPECTRA:	
Of Dye Solutions, Influence of Variation in Concentration on. Preliminary Paper. W. C. Holmes.....	35
Ultra-Violet, Grants for Determination of.....	269
ABSORPTION SYMPOSIUM:	
Absorption of Carbon Dioxide and Ammonia from Gas Bubbles. P. G. Ledig.....	1231
Absorption of Hydrogen Sulfide. F. W. Sperr, Jr.....	1237
Comparative Absorption Rates for Various Gases. W. G. Whitman and D. S. Davis.....	1233
Effect of Gas Velocity and Temperature on the Rate of Absorption. R. T. Haslam, R. L. Hershey, and R. H. Kean.....	1224
Mechanism of Absorption of Moderately Soluble Gases in Water. H. G. Becker.....	1220
Principles of Gas Absorption. W. K. Lewis and W. G. Whitman.....	1215
Quantitative Analysis of Mists and Fogs, Especially Acid Mists. H. C. Weber.....	1239
Accelerators, <i>See</i> Rubber.	
ACETONE:	
Distillation of Acetate of Lime. E. G. R. Ardagh, A. D. Barbour, G. E. McClellan, and E. W. McBride.....	1133
From Acetates. German Letter.....	537
Acetyl Salicylic Acid. <i>See</i> Salicylic Acid.	
Acheson, Edward Goodrich. American Contemporaries. F. A. J. Fitzgerald.....	971
Activin, a New Form of Active Chlorine. German Letter.....	759
Adhesives, Pentosan, Simultaneous Production of—and Furfural from Corncocks and Oat Hulls. F. B. La Forge.....	130
ADSORPTION:	
Effects of Filtering Materials on Sugar Solutions. G. H. Hardin and F. W. Zerban.....	1175
Processes. London Letter.....	538
Silicic Acid Gel as—Material. German Letter.....	1090
Advertising, Accuracy in. Editorial.....	553
Advertising Matter, Industrial Standards in.....	745
Advertising, Misleading. "Chemist" to an Industry, Editorial.....	1214
Air Service, U. S., More Liberal Budget for. The First Six Months. Editorial.....	773
Airships, Light Alloys for. German Letter.....	869
ALBERTA:	
Production of Carbon Black in. Canadian Letter.....	537
Research Council of. Canadian Letter.....	1284
Alchemy in Old New York, Gulian C. Verplanck's Account of. C. A. Browne.....	90
ALCOHOL:	
Aldehyde-Free, Note on an Improved Method for the Preparation of. Amino Acid Distribution in Proteins of Wheat Flours. R. J. Cross and R. E. Swain.....	49
Cramton Bill. Unfavorable Legislation. Editorial.....	663
Cramton Bill. Washington Letter.....	429
Denatured, Specially Confirmatory Test for Presence of Diethylphthalate in. E. A. Vuilleumier.....	1120
Ether, —, and Water, Vapor Pressure Curves for Systems Containing. E. A. Louder, T. R. Briggs, and A. W. Browne.....	932
Expansion in—and Amyl Acetate Plants. Canadian Letter.....	536
From Cane Blackstraps. Effect of Varying Additions of Acid. W. L. Owen and J. D. Bond.....	387
Industrial:	
Committee Meets. Washington Letter.....	981
Consumption of.....	378
Report of A. C. S. Committee on.....	532
Revised—Regulations. Washington Letter.....	540
Some Recent Developments in. J. M. Doran.....	641
Industry in Cuba. World-wide Chemistry.....	210
Italian Requirement for Denaturing—for the Manufacture of Formaldehyde. World-wide Chemistry.....	1285
Motor, Deliveries in France. World-wide Chemistry.....	210
Waste and. Editorial.....	1213
Alkali-Chlorine Products, Canadian Salt Company's Processes for Manufacture of. D. A. Pritchard and G. E. Gollop.....	1056
Alkali Works Inspection. London Letter.....	871
Allied Chemical and Dye Corporation. The American Chemical Prize. Editorial.....	443
ALLOYS:	
Aluminum-Copper-Tellurium, Properties and Structure of. F. T. Sisco and M. R. Whitmore.....	838
Aluminum in. D. H. Brophy.....	963
Aluminum-Silicon, Silicon in. J. D. Gat.....	959
Cast—of Aluminum Containing Small Amounts of Magnesium. Samuel Daniels.....	1243
Iron-Silicon, Determination of Silicon in—by Their Physical Properties. T. D. Yensen.....	366
Light—for Airships. German Letter.....	869
New—Resembling Stellite. German Letter.....	759
Rotoxit. German Letter.....	1285
Silver, Work on—Authorized. Washington Letter.....	101
Substitute for Platinum. German Letter.....	1285
Alumina, Pure, for the Manufacture of Metallic Aluminium. World-wide Chemistry.....	760
ALUMINIUM:	
Cast Alloys of—Containing Small Amounts of Magnesium. Samuel Daniels.....	1243
Developments. London Letter.....	1091
In Alloys. D. H. Brophy.....	963
Industry, American Investment in. Scandinavian Letter.....	979
New Uses for. German Letter.....	426
Simplification of the Separation of Zinc from Iron and. E. G. R. Ardagh and G. R. Bongard.....	297
Soluble—and the Hematoxylin Test in Filtered Waters. W. D. Hatfield.....	233
Aluminium Chloride and Zinc Chloride, New Catalytic Effects of. J. F. Norris.....	184
Aluminium-Copper-Tellurium, Properties and Structure of Some Alloys of. F. T. Sisco and M. R. Whitmore.....	838
Aluminium-Silicon Alloys, Silicon in. J. D. Gat.....	959
Alundum, Platinized—Cathodes in Electroanalysis. W. G. France and T. S. Eckert.....	802
American Cereal Chemists' Association, Convention at Minneapolis, Minn.....	718
AMERICAN CHEMICAL SOCIETY:	
An American Chemical Prize. Editorial.....	443
Chemical Reviews. A New Service. Editorial.....	442
Committee Reports:	
Advisory to the War Department.....	533
Guaranteed Reagents and Standard Apparatus.....	532
Industrial Alcohol.....	532
Occupational Diseases and Hazards in Chemical Trades.....	644
Patent and Related Legislation.....	531
Constitution, Changes in. Danger in Hasty Action. Editorial.....	992
Councilors, Instructing. Editorial.....	552
Council Resolution Regarding Metric System. Attention Authors!.....	4
Directory, Our. Editorial.....	774
Division of Cellulose Chemistry. Exhibit at Washington Meeting.....	364
Division of Dye Chemistry. Symposium.....	409
Division of Industrial and Engineering Chemistry:	
Absorption Symposium.....	1215
Heat Transfer Symposium.....	451
Division of Rubber Chemistry:	
Committee on Methods of Analysis. Standard Methods for the Analysis of Rubber Goods. S. Collier, chairman.....	397
Endowment Fund. <i>See</i> Endowment, A. C. S.....	1102
Intersectional Meetings:	
Cambridge, Mass. A Successful Experiment. G. J. Esselen, Jr., Cleveland, Ohio.....	207
Ithaca Meeting:	
Absorption Symposium.....	1215
A Chemical Month. Editorial.....	883
President's Address, Prospects and Retrospects. L. H. Baekeland.....	1077
Registration.....	1018
Report.....	1086
Joint Participation. Editorial.....	444
Meetings:	
Carrying the Message. Editorial.....	994
It Pays to Attend. Editorial.....	333
Papers, Uniform Requirements. Editorial.....	772
Standards. Editorial.....	552
New Haven Meeting. Dye Symposium.....	409
Officers for 1924. Editorial.....	3
Our Field. L. H. Baekeland. Editorial.....	332
Prize Essay Contest. <i>See</i> Prize Essay Contest.	
Washington Meeting:	
Address. The Expansion of Chemistry. E. E. Slosson.....	447
Cellulose Division, Exhibit of.....	364
Council Meeting. Report.....	446
General Meeting. Report.....	445
Heat Transfer Symposium.....	451
Record Attendance at. Editorial.....	444
AMERICAN CONTEMPORARIES:	
Acheson, Edward G. F. A. J. Fitzgerald.....	971
Babcock, Stephen M. Louis Kahlenberg.....	1087
Bailey, E. H. S. E. E. Slosson.....	316
Breneman, Abram A. Ellwood Hendrick.....	864
Mallinckrodt, Edward. W. L. R. Gifford.....	1194
Mason, William P. F. W. Schwartz.....	93
McGregory, Joseph F. Edward Ellery.....	530
Noyes, William A. A. M. Patterson.....	420
Richardson, Clifford. C. N. Forrest.....	1281
Venable, Francis P. J. M. Bell.....	755
American Engineering Council, Meeting. Washington Letter.....	209
AMERICAN INSTITUTE OF CHEMICAL ENGINEERS:	
Data Needed on Education. Editorial.....	882
Meetings: Denver, Colo., 865; Washington, D. C.....	94
American Pharmaceutical Association, Research Fund.....	155
American Society for Testing Materials, Meetings of Metals Committees. Washington Letter.....	1287
Amino Acid Distribution in Proteins of Wheat Flours. With a Note on an Improved Method for the Preparation of Aldehyde-Free Alcohol. R. J. Cross and R. E. Swain. (Gortner, Cross, and Swain, 319).....	49
AMMONIA:	
Carbon Dioxide and, Absorption of—from Gas Bubbles. P. G. Ledig.....	1231
Catalyzers for the Oxidation of. W. W. Scott.....	74
Increasing—Production with Improved Catalysts. A. T. Larson.....	1002
Interference of—with the Hypochlorite Reaction for Aniline. E. S. West.....	1270
Production of. Paris Letter.....	539
Synthetic. London Letter.....	427
AMMONIUM CHLORIDE:	
As a Fertilizer. Paris Letter.....	1287
Effect of—upon the Growth of Yeast and the Hydration of Gluten in Beer Wort. E. I. Fulmer, F. F. Sherwood, and V. E. Nelson.....	921

Amyl Acetate and Alcohol Plants, Expansion in. Canadian Letter	536	Blackstraps, Cane, Alcohol from. Effect of Varying Additions of Acid. W. L. Owen and J. D. Bond	387
ANALYSIS:		Bleaching Powder Explosions. A. H. Gill	577
Chemical, Standards of. German Letter	537	Bohr's Model of the Atom. A Review of Some Salient Features of Present Atomic Theories. E. E. Free	192
Standard Methods of. London Letter	871	Boiler Waters, Internal Treatment of. O. F. Andersson, A. S. Harvey, D. K. French. [See THIS JOURNAL, 15, 123] (1923)	206
Use of Ultra-Violet Fluorescence in. Paris Letter	428	Bolling Point Correction Chart for Normal Liquids. With Special Application to Petroleum Products. W. H. Bahlke and R. E. Wilson	1131
Aniline. See Dyes.		Bok Peace Award. Easy Money. Editorial	114
Annual Reports on the Progress of Chemistry. Increase in Price	691	Boll Weevil Problem. Washington Letter	981
Annual Tables, Reprints from	191	Bombing Tests and Smoke Screen	82
Anthracene, Quantitative Estimation of—in Anthraquinone. H. F. Lewis	1184	Bone Black and Decolorizing Carbons, U. S. Patents on. W. D. Horne	670
ANTHRAQUINONE:		BOOK REVIEWS. See end of this section.	
Decomposition of—by Heat. H. F. Lewis and Sherman Shaffer	717	Boomer, E. H., Awarded Canadian Fellowship of Chemical Science	355
Quantitative Estimation of Anthracene in. H. F. Lewis	1184	Borax, Production of—in Chile. World-wide Chemistry	210
ANTIKNOCK COMPOUNDS:		Boric Acid, Electrometric Study of Titration of. M. G. Mellon and V. N. Morris	123
Action of Tetraethyl Lead in Motors. Paris Letter	1199	Boron and Nitrogen, Case-Hardening of Steel by. T. P. Campbell and Henry Fay	719
Suggested Mechanism for Antiknock Action. G. L. Wendt and F. V. Grimm. See also Detonation	890	Bottle, New Spiral Gas-Washing. L. H. Milligan	889
Tetraethyl Lead. Editorial	1212	Brass, Colored. German Letter	1198
Antimony and Tin, Gravimetric Determination of Lead in the Presence of. Ernesto Stelling	748	Bread Making, Research in. Canadian Letter	536
Antimony and Tin Oxides, Solution of. Ernesto Stelling	346	Breneman, Abram A. American Contemporaries. Ellwood Hendrick	864
Antioxigens. Paris Letter	539	Bribery. Editorial	774
APPARATUS:		Brines, Organic Refrigerating. H. F. Zoller	1073
Chemical, Innovations in—Construction. German Letter	426	BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE:	
Constant-Level Device for a Thermostatic Bath. Isaac Bencowitz and H. T. Hotchkiss, Jr.	1193	Toronto Meeting, 1922. Canadian Letter	1090
Constant Water-Level Devices. R. E. Jefferson	1230	University of Saskatchewan Opens New Chemistry Building	1085
Constant Water-Level Device, Two Forms of. H. D. Wilde, Jr.	904	British Chemical Plant Manufacturers Association, Meeting of. London Letter	1091
Continuous Extraction—for Large Quantities of Plant Materials. C. E. Sando	1125	BRITISH EMPIRE EXHIBITION:	
Direct Reading—for Determining Approximate Specific Gravity of Solids. E. A. Vuilleumier	620	Hugh Griffiths. World-wide Chemistry	648
Enamel-Lined, Heat Transfer in. E. P. Poste	469	Ontario's Minerals at. Canadian Letter	536
For Testing Colors. World-wide Chemistry	977	British Empire Forestry Conference. Canadian Letter	208
Melting and Freezing Points of Pure Substances and of Eutectic Mixtures. Apparatus for Their Determination. E. W. Washburn	275	Bronzes, Phosphor, Rapid Determination of Phosphorus in. Leif Lindemann. (Jameson, Lindemann, 1282)	916
New Micromelting Point Apparatus. J. F. Clevenger	854	Budget, More Liberal—for Air Service and Chemical Warfare Service. The First Six Months. Editorial	773
Standard—and Guaranteed Reagents, Report of A. C. S. Committee on	532	Burets, Gas, New Correction Tube for. F. C. Vilbrandt	936
Tools of the Chemical Engineer. D. H. Killeffer		Butter, Artificial, Production of. German Letter	99
II—Weighing Devices	568	Butter Fat. See Fat.	
III—Fluid Measuring Devices	785	By-Products, Building on	675
(See also under appropriate name)		BOOK REVIEWS: 102, 211, 324, 431, 542, 637, 652, 763, 873, 982, 1093, 1202	1288
Apples. Vitamins in Canned Foods. II—The Vitamin C Destructive Factor in—. E. F. Kohman, W. H. Eddy, and Victoria Carlsson	1261	A B C of Atoms, by Russell. W. A. Hamor	103
Appropriations for Air Service and Chemical Warfare Service. The First Six Months. Editorial	773	Allen's Commercial Organic Analysis, edited by Sadler, Lathrop, and Mitchell. Vol. I—Alcohols, Carbohydrates, Yeast, Esters, Aldehydes, Vegetable Acids. F. C. Whitmore	434
Argentina, Production of Glycerol in	866	Vol. II—Fixed Oils, Fats, and Waxes. C. S. Jamieson	1289
Armstrong, E. F., to Visit United States	974	Alloys Resistant to Corrosion, published by Faraday Society. V. V. Kendall and F. N. Speller	103
ARSENIC:		Analytical Methods for Certain Metals, Including Cerium, Thorium, Molybdenum, Tungsten, Radium, Uranium, Vanadium, Titanium, and Zirconium, by Moore, Lind, et al. C. James	431
Ore Production, Reestablishment of. Scandinavian Letter	979	Analytical Microscopy, by Wallis. B. J. Howard	873
Preparation of Arsenic-Free Reagents. G. D. Beal and K. E. Sparks	369	Aniline and Its Derivatives, by Groggins. R. N. Shreve	765
White, Influence of Mercury and Other Impurities on the Rate of Oxidation of—by Nitric Acid. C. M. Smith and G. E. Miller	1168	Annual Report of the Department of Industries, Bombay Presidency, 1922-1923	544
Art and Chemistry. German Letter	321	Applied Chemistry, by Garard. L. W. Mattern	874
ASPHALT:		Artists' Pigments, by Weber. A. B. Davis	433
Bentonite for Grinding	1090	A. S. T. M. Specifications and Methods of Test for Textile Materials with Reports and Papers Relating Thereto, by Committee D-13 on Textile Materials, A. S. T. M. F. R. McGowan	431
Paints, Jellying of. Relation of Acidity to Jellying. H. C. Fisher	508	A. S. T. M. Tentative Standards for 1923. F. P. Veitch	103
Association of Feed Control Officials Meets. Washington Letter	1287	Auskunftbuch für die Chemische Industrie. Vols. I and II, edited by Blücher. Grinnell Jones	104
Association of Official Agricultural Chemists, 1924 Meeting	1196	Bleich-, Reinigungs-, Wasch-, Detachiermittel, Bleichverfahren und Bleichapparate der Neuzeit für Gespinnstfasern und Gewebe, by Bottler. G. H. Johnson	1292
Atom, Bohr's Model of. A Review of Some Salient Features of Present Atomic Theories. E. E. Free	192	Chats on Science, by Slosson. L. H. Baekeland	652
Atomic Weight Commission, German. German Letter	322	Chemical Encyclopaedia. A Digest of Chemistry and Chemical Industry, by Kingzett. J. F. Couch	1289
Authors, Attention! Metric System Resolution of Council	4	Chemical Engineering Catalog, edited by Turner	1204
Automobiles. Carbon Monoxide Poisoning in Private Garages. W. P. Yant, W. A. Jacobs, and L. B. Berger	1047	Chemical Synonyms and Trade Names, by Gardner. J. F. Couch	763
BABCOCK, Stephen M. American Contemporaries. Louis Kahlberg	1087	Chemisch-Technische Vorschriften, by Lange. C. J. West. Band II—Fasern, Massen und Schichten, 105. Band III—Harze, Öle, Fette, 325. Band IV—Dungemittel (Sprengstoffe), Futtermittel, Lebensmittel	875
Bacteria in Tannery Soak Waters. Similarity in Effect of Salts upon Bacterial Counts and upon the Stability of Colloidal Dispersions. J. A. Wilson and C. J. Vollmar	367	Chemistry in Industry, edited by Howe. G. L. Coyle	1204
Bailey, Edgar S. A Close-up of Professor Bailey. American Contemporaries. E. E. Slosson	316	Chemistry in the Twentieth Century, edited by Armstrong	875
Bak lite as a Luminous Filter. Paris Letter	761	Chemistry of Rubber, by Luff. R. P. Rose	212
Barbital Duty Based on American Valuation. Washington Letter	1287	Chemistry of the Rarer Elements, by Hopkins. S. C. Lind	324
Barium Dioxide, Increased Duty on	610	Chimie des Colloides et Applications Industrielles, by Meunier. Jerome Alexander	432
Baudouin Test, Observations on. C. O. Gravenhorst	47	Civilization and the Microbe, by Kendall	102
Bauxite, Oil Refining with. London Letter	760	Clouds and Smokes. The Properties of Disperse Systems in Gases and Their Practical Applications, by Gibbs. J. H. Mathews	654
BAYER 205:		Coal Carbonization, by Porter. H. A. Curtis	1205
Atherton Seidell	680	Coal-Tar Distillation and Working Up of Tar Products, by Warnes. J. M. Weiss	212
Remedy for Sleeping Sickness. World-wide Chemistry	649	Coke and Its Use in Relation to Smoke Prevention and Fuel Economy, by Nicol. A. C. Fieldner	212
Bearings, Journal. The Mechanism of Lubrication. III—The Effect of Oiliness on the Behavior of. D. P. Barnard, H. M. Myers, and H. O. Forrest. (Becker, 856; Barnard, Becker, 975)	347	College Chemistry Companion, by Kendall. H. G. Deming	983
Becket, F. M. Perkin Medal Award	196	Colloid Chemistry, by Alexander. R. A. Cortner	1290
Beck, Lewis C., A. B., M. D. A Pioneer in Pure Foods and Drugs. L. F. Kebler	968	Colloid Chemistry, by Svedberg. Jerome Alexander	544
Bear Wort, Effect of Ammonium Chloride upon the Growth of Yeast and the Hydration of Gluten in. E. I. Fulmer, F. F. Sherwood, and V. E. Nelson	921	Colloid Symposium Monograph, edited by Mathews. H. N. Holmes	324
Beet Molasses. See Molasses.		Colour Index, edited by Rowe. J. A. Ambler	982
Beet Sugar. See Sugar.		Commerce Yearbook, 1922 (including early part of 1923). Grinnell Jones	434
BENTONITE:		Commercial Fruit and Vegetable Products. A Textbook for Student, Investigator, and Manufacturer, by Cruess. C. A. Magoon	874
For Grinding Asphalt. Canadian Letter	1090	Comprehensive Treatise on Inorganic and Theoretical Chemistry. Vol. IV—Ra and Ac Families, Be, Mg, Zn, Cd, Hg, by Mellor. Graham Edgar	214
Jerome Alexander	1140	Das Erdöl, by Kissling. W. A. Hamor	325
BENZENE:		Das Leitvermögen der Lösungen, by Walden. Vol. IV of Handbuch der allgemeinen Chemie, by Ostwald. P. K. Frölich	1094
Production in India. World-wide Chemistry	210	Der Kalkbedarf von Mensch und Tier, zur Chemischen Physiologie des Kalks, by Loew. G. J. Fink	1292
Recovery of—from Illuminating Gas. Italian Letter	870	Die Legierung, by Ledebur. B. D. Saklatwalla	1291
Rubber-Benzene Solutions, Consistency of. W. H. Herschel	927		
Sulfonation of. A. W. Harvey and Gebhard Stegeman	842		
Switzerland Reduces Duty on. World-wide Chemistry	430		
Benzylpseudothiourea Salts of Naphthalenesulfonic Acids. R. F. Chambers and P. C. Scherer	1272		
BERGIUS PROCESS:			
Atherton Seidell	754		
In Italy. Italian Letter	870		
Beverages, Contamination of—and Other Food with Zinc. J. W. Sale and C. H. Badger	164		
Biosterine (Vitamin A). Tokyo Letter	540		

Editing the Day's News, by Bastian. Watson Davis.....	764	The Design and Working of Ammonia Stills, by Parrish. L. A. Ernst.....	1291
Einfache und Fraktionierte Destillation in Theorie und Praxis, by Rechenberg. Clark S. Robinson.....	654	The Development of the Sciences, by Yale University Press, edited by Ellwood Hendrick.....	653

The possibility of saving the friction load in rolling mills is enormous. Here are some figures submitted by the Vice President in charge of Operations and the Efficiency Engineer of a steel plant in the middle west. They were taken over a period of seven months and are absolutely conclusive.

Kind of Grease	Power per ton for one pass.	Grease per ton	Brass Cost per ton
★ Waverly	7.3 K.W.H.	.36 lb.	88 cts.
Excess cost of ★ over Waverly	28%	157%	60%

It is interesting to note that the Waverly Oil Works Company had nothing to do with this test or the compilation of figures. The test was conducted by the officials of the company in the interest of better lubrication in their plant.

Can you, Mr. Plant Executive, ignore these figures and overlook the power saving in your plant?

Send for the Waverly Industrial Lubrication Charts shown above—gratis.

Carbon Combustions In One Furnace

In the Hoskins Multiple Tube Combustion Furnace, five carbons can be run at one time—with a saving in time, space and power.

The furnace shown here is in the laboratory of the Jessop Steel Co., Washington, Pa. Similar furnaces are in almost every steel laboratory. With this furnace, all the eggs are in one basket—to be sure—but it is a safe basket. There is very small likelihood of burn-outs, because the furnace has heating units of CHROMEL.

These units are shaped like hairpins, and are located at the top and bottom of the furnace. The combustion tubes lie between them where all are subjected to identically the same temperature.

If you have a large number of carbons to run, and time and space are valuable to you—then this furnace would be an asset. Write for our NEW furnace catalog, describing it in detail.

Bausch & Lomb Laboratory Wave-length Spectrometer

LABORATORY workers will find this new Bausch & Lomb Spectrometer unusually appropriate and convenient for routine spectrometric work. It is of the constant-deviation-prism type, with the optical surfaces and moving parts completely enclosed.

The Telescope and Collimator are permanently aligned at right angles to each other. The wave-length drum can be read from the eyepiece position,—a great convenience.

The slit mechanism provides six fixed slits on a rotating glass disc coated with an opaque film of silver. The slits are cut in different widths from 0.025 mm to 0.3 mm. A numbered head indicates each slit as it clicks into place.

Salicylates

DOW

THE word purity might well have been originated to describe Dow Salicylates. They are produced under conditions which safeguard purity and cleanliness throughout all manufacturing and packing processes. The remarkably fine color of Dow Salicylates is known to the most particular users.

Rigid adherence to the Dow processes of manufacture insures sustained uniformity of each and every shipment.

The dependability of The Dow Chemical Company as a source of regular supply has been another factor in establishing recognized Dow leadership in Salicylate manufacture.

Let us quote on your 1925 requirements.

DR. MÜLLER'S X-RAY SPECTROGRAPH

Shearer X-Ray tube with interchangeable anticathode,
watercooled and self-rectifying,
and complete equipment for X-Ray Spectrography.

Provision is made for the following work:—

- (1) Determination of space lattice structure of crystals and powders and hence:
- (2) Analysis of Crystals and Powders, including those of metals, alloys, and other inorganic and organic substances.
- (3) Determination of Wavelengths of characteristic emissions of anticathodes with sufficient accuracy for analysis of solids used as anticathodes.

Photographs taken on Dr. Müller's X-Ray Spectrograph, using the Bragg Method, of the structure of fatty acids.

	Number of Carbon Atoms in the chain	Length of the chain as measured by the Spectrograms
Caprylic acid,	10	23.2×10^{-8} cms.
Lauric acid,	12	27.0×10 "
Myristic acid,	14	32.2×10 "
Palmitic acid,	18	34.7×10 "
Stearic acid,	18	39.6×10 "

This illustration and tables show results obtained from the long chain carbon compounds (fatty acids) on the Müller X-Ray Spectrograph, using a Shearer tube with copper anticathode. Time of exposure, 4-5 milliampere-hours on each side of the primary beam.

The illustration is reproduced by the kind permission of the Chemical Society from the paper by Dr. Alexander Müller on "The X-Ray Investigation of Fatty Acids," *Jour. Chem. Soc.*, 1923, page 2043 et seq.

Descriptive pamphlet and price list post free on application. Full printed instructions including precautions to be taken issued with each instrument.

HEUSSER

THE BALANCE SUPREME

Group "H" Heusser Analytical Balance.

SOMETHING NEW

To meet the demand for a high grade balance, at a low cost, for work requiring 1/10 to 1/20 mg. accuracy, Mr. Wilfrid Heusser has developed a new Analytical Balance, known as the Group "H" Heusser Balance.

In the Group "H" Heusser, *one single manipulating knob*, replaces the releasing knob and push button of the old-time balances, making it possible to weigh much faster.

The Group "H" Heusser has stellite knife edges and agate bearings. Stellite knife edges are harder than steel edges, less brittle than agate edges, and are practically indestructible from either knocks or corrosion.

Price . . \$100.00

Heusser Balances are carried in stock by most reliable Assay Supply Houses. If your dealer cannot supply you, write our nearest office.

Booklet on Heusser Balances gladly sent upon request.

Ganschow Type "A" Speed Transformer in the Plant of The New Jersey Zinc Co.

Built-in Dependability

THE rigorous demands of unusual service require nothing of Ganschow Speed Transformers that is not built into every unit which we make.

No special construction is necessary to cope with the conditions in chemical plants where acid fumes, steam, abrasive dust or extreme conditions of heat and humidity destroys other types of power transmission and speed reduction units, or renders them highly inefficient.

Send for our Bulletin No. 101. It explains the details of construction that makes Ganschow Speed Transformers dominant in their field.

The Ganschow Type "B" Speed Transformer is applicable to drives where conditions of space or machine construction demands an angle drive. It is built in a wide range of ratios and capacities.

Users of Baker's Analyzed— Industrial Series No. 6

The High Explosive Research Laboratories of the Atlas Powder Company near Tamaqua, Pa., are located in isolated structures because of the extremely hazardous nature of their work. Each building houses a complete experimental laboratory. "Baker's Analyzed" chemicals are used largely in this important and dangerous work.

THE manufacture of high explosives is a dangerous business at best, and chemical research in powder plants is particularly hazardous. Reagent chemicals of known purity and uniformity are of the utmost importance in experimental laboratories where this delicate work is carried on.

"Baker's Analyzed" chemicals are used extensively by the big powder companies, because the famous Baker policy of analyzing each product and stating the analysis on the label assures an unusually high standard of uniformity.

C. P. "Baker's Analyzed" chemicals have set a definite standard in industrial chemistry, and every day more and more experienced chemists are writing on their requisitions, "must be Baker's Analyzed."

Send for Catalog and Price List

Our new catalog and price list is now ready and will be sent you on request.

BAKER'S INFORMATION SERVICE FOR LABORATORY MEN

If you are not one of the 30,000 chemists on our mailing list, send us your name and we will send you the Price List of "Baker's Analyzed" as published and the *Chemist-Analyst*, our quarterly digest of laboratory short cuts and discoveries, written in laboratories by practical men.

STONEWARE ACID PUMPS

For raising a large volume of acid or other corrosive liquid to a moderate height, the great advantages of the armored chemical stoneware centrifugal pumps manufactured by the General Ceramics Co., have met with very favorable recognition. It can be said of them alone that they are absolutely incorrodible, the impeller and casing and all other parts coming in contact with the liquid being of chemical stoneware which is unaffected by any acid or other corrosive liquid (with the exception of hydrofluoric acid).

A few of the present applications of these pumps are for handling the following acids or corrosive solutions:

Muriatic Acid

Nitric Acid

Sulphuric Acid

Waste Acids

Chlorinated Brine

Hydrogen Peroxide

Vinegar

Fruit Juices

Tetrachloride of Tin

Zinc Chloride

The stoneware pump housing is completely enclosed in a cast iron shell. It will therefore withstand the roughest handling and there is also no danger from internal pressure when used for high lifts.

Shut that door!

was written as plain as a newspaper scare head on the recording thermometer chart illustrated. A painter had left the door of the paint baking kiln open, but the watchman had been taught to read the chart.

\$1500.00 Worth of Beds were Saved

The Foxboro chart shown was the means of saving them. Heat was turned on at 12:45 p.m. At 5:25 a painter opened the kiln to put in a few beds and carelessly left the door open. The watchman, seeing the drop in temperature on the chart, shut the door and saved the beds.

This Foxboro Recording Thermometer has saved thousands of dollars for its owner, a metal bed manufacturer. Previous to installation the engineer was unjustly blamed for heavy losses due to improper baking of the enamel, when, in his own words, "It was a 50-50 gamble as to whether beds would be baked or fried."

Other Savings

One manufacturer recently reduced his annual coal bill \$3,000 to \$4,000; another saved enough to pay for his Foxboro

instruments the first two weeks they were installed and estimates his annual savings at \$2,000 to \$3,000; and there are countless similar examples wherever temperature, pressure or humidity is a factor.

In Your Particular Case

Do your men know the real significance of Foxboro temperature and pressure records? Do you yourself realize how valuable they can be?

Read your charts! They perpetuate daily experience. Study them and you can base all your decisions on fact. Often they provide the only tangible evidence of your value to the company. They write the most interesting story ever told—a minute-to-minute account of your own accomplishment.

Make sure of the reliability of these vitally important records. Specify Foxboro Recording Thermometers and Gauges with the Improved Helical Tube Movement, guaranteed to be accurate no matter how severe the service conditions.

Let us help you. Write for Bulletin "AK" 96-1.

THE COMPASS OF INDUSTRY

BAKELITE

Resistant to Mercury

Bakelite is used for this Mercury Gauge, made by the L. D. Caulk Company, of Milford, Delaware, because it is unaffected by mercury.

In addition, the use of Bakelite has simplified production. The four parts of the gauge are completely finished during the molding operation, ready for assembling, and no fitting or machining is necessary.

Bakelite Research Laboratories are maintained to help manufacturers in the solution of their problems. Can we be of service to you?

THE MATERIAL OF A THOUSAND USES

FLETCHER Steam turbine driven CENTRIFUGALS

SAFE
ECONOMICAL
DURABLE

Fletcher Cantilever Suspended Steam Turbine
Driven Centrifugal

THESE centrifugals have important advantages not available in other types. They can be used with safety in corrosive or explosive fumes. Speed is regulated by a dependable governor. Exhaust steam can be used for heating or drying.

MIXING LIQUIDS

Hundreds of manufacturers
are now using

"HY-SPEED"

Portable Electric Mixers with

"PUSH-PULL"
PROPELLERS

Why?

Because any tank can be used for mixing.

Individual mixers can be started by snapping switch when needed.

No overhead shafting, belting, exposed gears, starting boxes, installation expense or large electric bills.

"Push-Pull" propellers also mix better and faster.

Vitreosil ^{Fused Pure Silica} the Absolute Corrosion Resistant

Concentrating
Radium
Solutions

As constantly indicated by current scientific LABORATORY and INDUSTRIAL Reports

(Sources of the following excerpts will be gladly named upon request.)

Preparation of Chemically Pure Nitric Acid

Nitric Acid.—Chemically pure nitric acid was distilled from a quartz container, through a quartz condenser into a quartz receiver.

For Ammonia Oxidation

There is an abundance of evidence which shows that there is a serious decomposition of ammonia by almost all bodies except silica at temperatures favorable to the catalytic oxidation of ammonia.

Handling Hot, Moist Chlorine

Finally it has also become known that the use of certain vessels, for example those made of quartz, enables the chlorination of methane to be effected at high temperatures with moist reaction gases.

In Producing Mercuric Chloride

It is preferable to perform the process in a vessel of quartz or quartz glass or to use, in view of the high temperature, quartz admission tubes for both the mercury and the chlorine. When the process is carried on in this way, it is possible to continuously maintain the reaction, which may be assisted by gentle heating, the whole reaction vessel being filled with a brilliant green flame.

Combustion of Hydrogen in Ammonia Synthesis

we prefer to construct the shell of some highly heat resistant material such as fused silica or quartz, rather than to make it of iron or the like. Such material can be heat insulated, or otherwise have the required temperature attained therein, without danger of melting the tube or contaminating the product, and this is a feature the importance of which can scarcely be overestimated.

Retorts for Hot Phosphoric Acid in Manufacturing Ethane

We employ vessels or retorts as indicated at 1, made of fused quartz, since such vessels have a low coefficient of expansion, are resistant to the corrosion of the acid employed, and are of a highly refractory nature so that violent changes of temperature may occur without danger of fracturing the vessel.

Unaffected by Sulphuric Acid Under High Pressures at 312° C.

At the temperature used (312°) even Pyrex glass is rapidly attacked by sulfuric acid, wherefore the use of silica tubes.

New Branch Office

To all users of wire cloth in the New England States we announce the establishment of a branch office as follows:—

Newark Wire Cloth Co.
66 Hamilton St., Cambridge, Mass.

Our new factory on Verona Ave., Newark, N. J.

This is in keeping with the gradual healthful growth which began with our very first year of business.

The Newark Wire Cloth Co. was organized by the pioneers of the wire cloth industry of the United States. We started with three old-fashioned hand looms.

We outgrew this humble beginning because we began making a QUALITY cloth. During the following years we continued the practice of making nothing but QUALITY cloth. And QUALITY is still our unyielding policy. Our new factory just completed in Newark, N. J., is shown above.

Today we are equipped with the most modern machinery. We are able to manufacture from a 4" space of heavy wire down to the finest cloth made anywhere, and we make it with the utmost accuracy in wire diameter, weave and spacing.

NEWARK WIRE CLOTH

is now made of all metals: Aluminum, Brass, Copper, Bronze, Phosphor Bronze, Nickel, Steel, Monel Metal, Silver, Gold, Platinum, Nichrome and Special Alloys.

Send us a sample of the wire cloth you want duplicated. Or, specify the spacing, the wire diameter wanted, the kind of metal, the length and the width. Leave the rest to us.

At the left we show the "NEWARK" Metallic Filter Cloth.

This is made in several different grades for filtration work and centrifugal linings.

Double surface. Extra strong. Durable. Easily Cleaned. Even texture.

The semi-circle at the top shows the exact size of the mesh, while the one at the bottom is magnified. Note the spiral overlap weave.

Used in all makes of filter presses in place of cotton, duck, wool, jute and other filtering mediums.

THE AINSWORTH IMPROVED VERNIER RIDER CARRIER

Weighs by 1/10 mg. from 0 to 100 mg. without the use of fractional weights. The rider is used first for balancing the beam and then for weighing and may be instantly shifted thruout its entire range.

The rider, a unit of weight, is quickly adjusted against your laboratory standard.

The cheapest and most accurate device on the market for rapidly weighing up to 100 mg.

RAPID ACCURATE CONSTANT

THE PRECISION FACTORY

2151 Lawrence Street, DENVER, COLO., U. S. A.
Prompt attention given to Balance and Instrument repairing.

THE QUALITY YOU CAN TRUST

There need be no worry about crucible trouble in the middle of a melting operation if the crucible you use bears the Dixon name.

You can depend upon Dixon crucibles to withstand heat after heat for an unusually long time under the most trying conditions.

There's a Dixon Crucible for every Metallurgical Requirement.

We made the first successful "blacklead" crucible in 1827 and have ever since maintained a standard of efficiency and dependability that has made our product the first choice of successful foundrymen.

What are YOUR requirements? See Booklet No. 146-A
