EVENTUALITIES MODERNIZATON OF RAILWAY LINE SECTIONS ŽILINA - ČADCA - ZWARDOŇ

Summary. The paper presents facility of modernization corridor number 6: Kittse - Bratislava - Žilina - Čadca - Zvardoň in section line Žilina - Čadca - Zvardoň. Here are presents various facilities increasing speeds in the particular section.

MOŻLIWOŚCI MODERNIZACJI LINII KOLEJOWEJ ŽILINA – ČADCA – ZWARDOŃ

Streszczenie. W artykule przedstawiono możliwość modernizacji międzynarodowego korytarza nr 6: Kittse – Bratislava – Žilina – Čadca – Zwadroń na odcinku Čadca – Zwardoń. Zaprezentowano różne możliwości podwyższenia prędkości na tym odcinku

1. INTRODUCTION

Railway traffic has important position in European traffic network. In conception strategic intention ŽSR there is considered with development of railway infrastructure. Development will be realize on basis international convention by system modernization of railway lines and construction high-speed line.

Among modernized railway lines, which have been put on into the register of international railway magistrals, is also corridor number 6: Kittse (ÖBB) - Bratislava - Žilina - Čadca - Zwardoň (PKP). Part of this corridor on territory Slovak republic is also the line section Žilina - Čadca - Zwardoň. Modernization of railway line on this section are accomplished: on line section Žilina - Čadca on speed 120 km/h and on line section Čadca - Zwardoň on speed 70 km/h.

2. ACTUAL ASPECT ON THE RAILWAY LINE

Actual aspect on the section Žilina - Čadca - Zwardoň is possible separate up into two parts from viewpoint of direction and speed coefficients. Line section Žilina - Čadca constitutes doble-line railway. This line section is located in the valley of the river Kysuca. These valley is built-up and from station Krasno nad Kysucou is very narrow. Actual railway line in this section has these critical running speeds :

| | |
|----------------------------|----------------|
| km 338,746 - km 254,997 | speed 100 km/h |
| km 254,997 - km 258,868 | speed 80 km/h |
| km 258,868 - km 269,540 | speed 100 km/h |
| km 269,540 - km 270,450 | speed 90 km/h |
| km 270,450 - km 273,448 | speed 80 km/h |
| km 273,448 - km 278,535 | speed 70 km/h |
| km 278,535 - km 279,008 | speed 80 km/h |
| km 279,008 - station Čadca | speed 60 km/h |

Single-line railway in the section Čadca - border between Slovakia and Poland is located on built-up territory of the river Čerňanka. In mountain scene Kysuce railway line is located on arduous direction and down-gradient coefficients. These coefficients agree only raise critical running speed. On line section station Cadca - border between Slovakia and Poland are these critical running speeds:

| | |
|--------------------------|---------------|
| station Čadca - km 1,869 | speed 40 km/h |
| km 1,869 - km 3,661 | speed 80 km/h |
| km 3,661 - km 6,569 | speed 50 km/h |
| km 6,569 - km 9,063 | speed 60 km/h |
| km 9,063 - km 13,021 | speed 50 km/h |
| km 13,021 - km 13,755 | speed 40 km/h |
| km 13,755 - km 20,007 | speed 50 km/h |

From actual speed coefficients on railway line section Žilina - Čadca - Zwardoň result of demand of modernization railway line for claim speed on all sections.

3. FACILITY OF MODERNIZATION LINE SECTION ŽILINA - ČADCA - ZWARDOŇ

On basis actual aspect of direction coefficients on this railway line section were examined facility increases of speed:

| | |
|---|----------------------|
| station Žilina - station Krasno nad Kysucou | from 100 to 140 km/h |
| station Krasno nad Kysucou - station Čadca | from 80 to 100 km/h |
| station Čadca - station Skalité | from 80 to 120 km/h |
| station Skalite - station Zwardon | from 70 to 100 km/h |

Facility increase of speed in case of embarrassed coefficients as so requirement minimal cut of railway line were check up with untraditional settings out data (Bloss). These facility were checked up for noticed speed (chart 1).

From check up facility increase of speed on minimal re-aligning of the track as so from demand speed serene section put off:

- station Žilina - station Krasno nad Kysucou to maximum speed 120 km/h.

- station Krasno nad Kysucou - station Čadca to maximum speed 80 km/h,
- station Čadca - station Skalité to maximum speed 100 km/h,
- station Skalité - station Zwardoň to maximum speed 70 km/h.

Against actual asped is the fewest increases of speed on section Krasno nad Kysucou - Čadca, where in call of actual direction coefficients (minimal track course radius 298 m) isn't possible without rekonstructed line increase speed. In this scene the preliminary line of the railway line invites construction of the railway tunnels. Second possibility on this section is minimal re-aligning of the track and line high-speed construct built in future.

4. INCLUSIONS

In the is possible to say. The railway line, which have been put on into the register of railway magistral on section Žilina - Čadca - Zwardoň is possible to modernize over demand increase of speed to required indexes except section station Krasno nad Kysucou - station Čadca. Over design larger adjustment of track level is possible increase speed so above this

Table I
Facility increase of speed

| Radius [km] | Speed R [m] | Speed V [km/h] | Deficiency | | | Evaluate | | | of cant np [mm] |
|----------------------|-------------------|----------------------|-------------|-----------|------------|-----------|------------|-----|-----------------------|
| | | | Rmin [m] | Lo [m] | Lpb [m] | do [m] | doh [m] | | |
| 5.73365 - 5.88468 | 560 | 80 | 350 | 17 | | 20 | 54 | Yes | |
| | 100 | 100 | 550 | 40 | 34 | 71.021 | 25 | 84 | Yes |
| | 110 | | 650 | | 45 | | 27.5 | 102 | No |
| | 120 | | 775 | | 58 | 30 | | 120 | No |
| 6.29791 - 6.49115 | 950 | 80 | 350 | 10 | | 20 | 31 | Yes | |
| | 100 | 100 | 550 | 17 | 20 | 159.236 | 25 | 49 | Yes |
| | 110 | | 650 | | 26 | | 27.5 | 60 | Yes |
| | 120 | | 775 | | 34 | | 30 | 71 | Yes |
| 6.56969 - 6.60576 | 900 | 80 | 350 | 11 | | 20 | 34 | Yes | |
| | 100 | 100 | 550 | 0 | 21 | 36.079 | 25 | 52 | Yes |
| | 110 | | 650 | | 28 | | 27.5 | 64 | Yes |
| | 120 | | 775 | | 36 | | 30 | 75 | Yes |
| 6.70590 - 6.74197 | 1050 | 80 | 350 | 9 | | 20 | 29 | Yes | |
| | 100 | 100 | 550 | 0 | 18 | 36.079 | 25 | 44 | Yes |
| | 110 | | 650 | | 24 | | 27.5 | 54 | Yes |
| | 120 | | 775 | | 31 | | 30 | 65 | Yes |

requiment and it: on section Žilina - Krasno nad Kysucou except for 140 km/h (transfer railway line behind stop Brodno), on section Čadca - Skalité to 120 km/h (stransfer railway line infront station Skalité) and on section Skalité - Zwardoň to 80 km/h (larger re-aligning of the track in courses, more galore land-work). Problem is only on section Krasno nad Kysucou - Čadca. The last possibility is only construction of new railway line for high-speed. All stations are necesarry rebuilt to required speed on main tracks.

Streszczenie

Transport kolejowy zajmuje poczesne miejsce w europejskiej sieci transportowej. W konceptach strategicznego rozwoju ŽSR przewiduje się rozwój infrastruktury kolejowej. Wśród modernizowanych linii kolejowych, które zostaną dostosowane do standardów międzynarodowych magistral, jest korytarz nr 6: Kittse (ÖBB) – Bratysława – Žilina – Čadca – Zwardoń (PKP). Przewiduje się dostosowanie odcinka Žilina – Čadca do prędkości ruchu 120 km/h, natomiast odcinka Čadca – Zwardoń do prędkości 70 km/h.

W artykule przedstawiono krytyczne punkty powodujące ograniczenia prędkości na ww. odcinkach oraz różne środki, jakie należy podjąć w celu podwyższenia prędkości w tych punktach.
